PATENT  
P56937**DISCUSSION**

According to the Korean Office action, **Nozawa, et al.** JP'548 discloses that many pieces of units, having fine structure, are formed in parallel on a silicon wafer. This unit has drive elements (a switching transistor 34, a drive transistor 37, a capacitance 36) of an organic EL element (pixel) 37. Then, unit blocks 39 are manufactured by dividing this silicon wafer. These unit blocks 39 are arranged at prescribed positions of a glass substrate (substrate for display) 52. Driving elements for respective pixels 35 are connected with signal lines 31, power source lines 32, scanning lines 33 and capacitance lines 38.

The citation of the foregoing references is not intended to constitute an assertion that other or more relevant art does not exist. Accordingly, the Examiner is requested to make a wide-ranging and thorough search of the relevant art.

No fee is incurred by this Statement.
